

# YOUNG BASILE

## Industry | Medical Devices

Young Basile lawyers have extensive experience working in and for the medical device industry. Our depth of industry knowledge coupled with our experience in the development of customized commercial use strategies for successful market positioning and entry, makes us a top choice for medical device companies around the world.

---

### Our Capabilities

From advanced imaging systems and software to orthopedic implants, our attorneys understand medical device technology and businesses. Our attorneys have graduate and undergraduate degrees in bioengineering, chemistry and life sciences, as well as technical backgrounds and industry experience in navigable catheters, imaging systems and software, implantable devices, surgical cutting and suturing tools, bone and joint replacements, biomaterials, fiber optic, magnetic and ultrasound sensors and a variety of other medical technologies.

### Corporate and Finance

We work with large multinational corporations, midsize businesses and entrepreneurs in the medical device industry on corporate and transactional matters. Our work includes financings, partnership agreements and commercial transactions including manufacturing, supply and distribution agreements. We help emerging medtech companies from the ground up to grow their business, protect their intellectual property assets and support the regulatory approval process in conjunction with FDA counsel.

### Protecting Technology and Brands

Young Basile provides turnkey solutions for acquiring and protecting medical device technology and brands. Our experience in this area includes patent prosecution as well as freedom to operate and patent landscape studies. Our team has built patent portfolios for a range of medical device technologies. We have assisted major consumer product companies in the launch of new medical devices by reviewing and clearing hundreds of competitor patents. We also have a robust trademark practice and have built, defended and enforced global trademark portfolios.

### Commercial and IP Litigation

Our technical experience is invaluable in effectively handling litigation related to medical device companies, including patent claims, contract and license disputes, class action defenses and employment-related litigation. We serve as lead counsel in complex IP litigation nationally, and we are a firm of choice for partnering with larger firms on litigation to provide depth of knowledge in sophisticated technology issues, drive down cost, and leverage knowledge gained from our prosecution and strategy work.

### Examples of Our Work:

Our attorneys have handled patent drafting, prosecution and/or clearance in the following medical technologies:

- Blood glucose monitoring systems
- Dental implants
- Bio-absorbable tissue scaffolds
- Cardiac pumps
- Fiducial devices
- Biocompatible polymers
- Cardiac ablation systems
- Atrial fibrillation treatment
- Catheters
- Breast implants
- Ultrasonic treatment of ocular disorders
- Ocular lenses
- Injection/mixing devices for ocular drug delivery
- Bone screws
- Spinal implants and plates
- Prostheses
- Pulmonary ablation (RF, thermal, electroporation)
- Pulmonary mapping and ablation systems
- Robotic surgery
- Imaging
- Cardiovascular stents (including drug eluting)
- Tissue ablation
- Bone grafts
- Polypropylene mesh
- Indwelling catheters
