

Young Basile has extensive experience patenting and protecting chemical and material science technologies, including organic and inorganic chemistry, chemical engineering, environmental remediation, plastics, and micro fabrication.

Chemical & Materials

Intellectual property plays a particularly critical and central role in the chemical and materials industries. A robust and international intellectual property strategy safeguards your innovation, research, and expertise from the initial stages of ideation through development, testing and trials, manufacturing, and distribution. Our commitment is to protect your investment, cultivate your innovation, and maximize your competitive advantage.

Our Capabilities

Our experienced attorneys are committed to working with you to foster innovation and safeguarding your inventions in the chemical and materials science arts. Our extensive experienced team allows us to adapt to your needs and respond to your dynamic business goals. We are dedicated to navigating the complex landscape of intellectual property to ensure that your ideas receive the protection they deserve. Our capabilities include, but are certainly not limited to:

1. Patent Prosecution

Our skilled patent attorneys will meticulously carve out property rights to meet your technical specifications while maintaining a business-focused and growth-oriented perspective.

2. Portfolio Management

Let us handle your IP needs. We will advise on patent strategy, ensure ongoing development to meet your business needs, and proactively monitor and forecast your property rights.

3. Global Intellectual Property Strategy

Our team will navigate and manage your global patent and property portfolio to maximize your protection on a macro scale across jurisdictions.

4. Ideation and Technical Refinement

Young Basile's attorneys bring years of industry and in-house experience. We'll work alongside you to refine, enhance, and advise on technical innovation.

5. Consulting and Strategy

We offer tailored consulting services to help you develop robust IP strategies that align with your business goals. Our flexible approach to developing IP strategies allows us to work with clients to adjust their IP strategies or develop new IP strategies as business conditions change. Using the latest tools, our expertise in chemistry and materials technology allows us to provide insights that drive effective patent innovation, management and enforcement including development of agreements for joint development, licensing, sale of products, and entity formation.

YOUNG BASILE

Industry | Chemical & Material Science

Our Experience

Our attorneys leverage years of industry expertise and in-house experience to provide robust technical and legal advice specific to your innovation and needs. The Young Basile team is comprised of PhD's, seasoned industry experts, former bench scientists, and life-long academics who are committed to fully embracing and understanding your innovation. Our experience includes work in the following fields and technologies:

- Batteries
- Solvents, Catalysts, and Solution Chemistry
- Polymers, Resins, Adhesives, Dyes, and Laminates
- Small Molecule Chemistry
- Additive Manufacturing
- Chemical and Fabrication Processing
- Composites
- Biorganic Chemistry
- Pharmaceuticals

Representative Clients

- Nissan Motor Corporation
- Trinseo
- Apple
- Novomer
- Danimer Scientific
- Jabil
- Rubedo Life Sciences
- Prosetta Biosciences
- Lilac Therapeutics
